

BEDBUGS TREATMENT – TARGET HEAT TREATMENT

We have been contracted to provide a pesticide application for the control of **Bedbugs**.

We require access to your suite between the hours of **9AM and 5 PM**.

As a precaution during the application of the pesticide, we require that you vacate your suite for **4 - 6 hours** from the time of application.

NOTE: If you are unable to accommodate this appointment, please contact your Property Management and/or Ecopest immediately. Ecopest is not responsible for any stains or damage that may occur.

For our service technicians to treat most effectively, we ask your co-operation in carrying out the following instructions:

1. In your **bedrooms**: Move all furniture at least **2 feet** away from the walls so treatment can be applied to the perimeters.
2. All baseboards need to be loosened from the wall approximately 1/2 inch so the treatment can be applied behind the baseboards.
3. Remove all linens and blankets from bed and put in plastic bags for washing. Also remove the mattress and boxsprings from bed frames and lean them against the wall so space exists for our technicians to work around them.
4. Remove all clothing and items from floors, drawers, and the bottom of closets (hanging can remain). Please wash all infested laundry in **hot** water/dryer (all recently used items including bedding). Place these items on the floor in the centre of a room.
5. In your **living room**: Move all furniture at least **2 feet** away from the walls to enable treatment to be applied to baseboard perimeters. Heavy wall units may remain, and we will work around them. Couches and chairs must be accessible to technicians – do not cover with sheets or items.
6. Remove all clothing and items from the bottom of broom, storage, and linen closets and place these items in the center of a room. These items do not require covering over unless they contain dishes or food.
7. Birds and pets must be removed from the premises, and fish tanks (if any) **must** be covered and the motors turned off, to prevent any possibility of poisoning.
8. Children's toys should be placed in plastic bags or covered toy boxes.
9. Don't place items on **beds, sofas and/or chairs** as our technicians will need access to them for a spray along the seams
10. Unplug all cords from outlets, and cover TV's, computers, and other electronic items to prevent any spray from getting on them.

NOTE: Upon re-entry to your premises, ensure that fresh linen is placed on all beds. **Do not wash any of the baseboards or bed frames for a period of at least six weeks. The pesticide has residual effects lessened by washing.** Kitchen counter tops, cutting boards, fridge and stove tops should be washed prior to any items being returned to them. Vacuum after treatment especially along the baseboards, use crevice tool to get into corners and cracks, also vacuum seams of box springs, mattresses and associated bedroom and upholstered furniture in the living room. Regular vacuuming should be done because cleanliness and sanitation is a vital part of eradication and successful treatment.

Where pregnancies, allergies, illnesses or other unusual circumstances occur, occupants may wish to remain out of the premises for periods **longer** than those indicated above.
